Can documents which do not contain any keywords of the original query receive a positive similarity coefficient after relevance feedback?

- 1. No
- 2. Yes, independent of the values β and γ
- 3. Yes, but only if $\beta > 0$
- 4. Yes, but only if $\gamma > 0$

A posting indicates...

- The frequency of a term in the vocabulary
- 2. The frequency of a term in a document
- 3. The occurrence of a term in a document
- 4. The list of terms occurring in a document

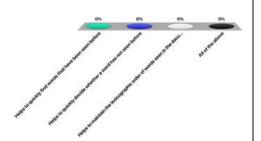

When indexing a document collection using an inverted file, the main space requirement is implied by ...

- 1. The access structure
- 2. The vocabulary
- 3. The index file
- 4. The postings file

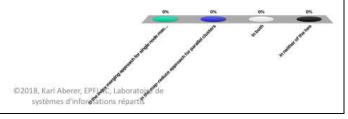

Using a trie in index construction ...

- 1. Helps to quickly find words that have been seen before
- 2. Helps to quickly decide whether a word has not seen before
- 3. Helps to maintain the lexicographic order of words seen in the documents
- 4. All of the above

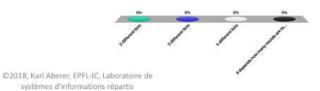

Maintaining the order of document identifiers for vocabulary construction when partitioning the document collection is important ...

- in the index merging approach for single node machines
- 2. in the map-reduce approach for parallel clusters
- 3. in both
- 4. in neither of the two

When applying Fagin's algorithm for a query with three different terms for finding the k top documents, the algorithm will scan ...

- 1. 2 different lists
- 2. 3 different lists
- 3. k different lists
- 4. it depends how many rounds are taken

Once k documents have been identified that occur in all of the lists ...

- These are the top-k documents
- 2. The top-k documents are among the documents seen so far
- 3. The search has to continue in round-robin till the top-k documents are identified
- Other documents have to be searched to complete the top-k list
