Distributed Information Systems Spring Semester - 2019

CS-423

IN, SC, EL, SV, MES, SIE, Biocomputing Masters

Time and Place

Lecture: Monday 10:15-12:00 Room INF1 Exercise: Thursday 12:15-13:00 Room INF1

Karl Aberer

Distributed Information Systems Laboratory

©2019, Karl Aberer, EPFL-IC, Laboratoire de systèmes d'informations répartis

Goals of the Course

Understand what is a "Distributed Information System"?

- e.g. Web Search Engines, Online Social Networks, etc.

Understand which are key problems relevant for DIS?

 e.g. modeling, storage, indexing, retrieval, mining, recommending, integration, etc.

Master common techniques used to solve these problems

 e.g. vector space retrieval, association rule mining, schema mapping etc.

Assumption: basic knowledge in databases, e.g. from CS-422 Database Systems

Focus of the Course

Master important **Models and Algorithms** for representing and processing information:

Data Science

Conceptual foundations to practically use tools and platforms for Data Science

 Complementary to Applied Data Analysis by Bob West

© 2019, Karl Aberer, EPFL-IC, Laboratoire de systèmes d'informations répartis

Other Related Courses

In synergy with

Applied Data Analysis

Complementary to

- Introduction to database systems
- Database systems

Some overlaps possible with

- Introduction to machine learning
- Machine learning
- Introduction to natural language processing
- Internet analytics

The Course - Lecture

Lecture

- standard ex cathedra lecture
- but feel free to interrupt, ask questions ...

Web platform: Moodle

 Course notes and exercises will be published on the Web in advance

Questions using TurningPoint

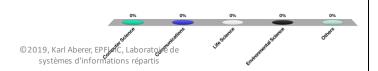

- Session ID: DIS2019

- Messaging is enabled

© 2019, Karl Aberer, EPFL-IC, Laboratoire de systèmes d'informations répartis

Which section are you from?

- 1. Computer Science
- 2. Communications
- 3. Life Science
- 4. Environmental Science
- 5. Others

Did you take Applied Data Analysis

- 1. Yes
- 2. No

Exercises

Weekly exercises

- 2-3 problems to solve

Most problems will be (simple) programming exercises

- Uses Python
- Focus on understanding the techniques (not programming skills etc)

Exercises and exam questions from previous years will be made available as well

© 2019, Karl Aberer, EPFL-IC, Laboratoire de systèmes d'informations répartis

Continuous Control

1 programming midterm: March 18

• Evaluate your programming skills (for yourself)

2 quizzes: April 22 and May 20

 Multiple choice questions on the content covered during the previous weeks

All during exercise session

©2019, Karl Aberer, EPFL-IC, Laboratoire de systèmes d'informations répartis

Grading

Results of continuos control will be part of grade: 25%

- When you are excused (e.g. illness) the session is not counted

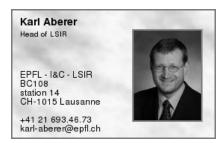

Final Exam: 75%

- Questions similar to the question in exercises and quizzes
- will assume you attended the lecture
- will assume you did the exercises
- examples from earlier years (exercises, exams) provided for preparation

Exam Support: Your computer will be admitted to the exam, not the Internet! Also your notes.

Schedule

Week	Date	Cont. Eval.	Area	Торіс
1	18 February 2019		Introduction	Distributed Information Systems - An Overview
2	25 February 2019		Information Retrieval	Basic Text Retrieval Models
3	04 March 2019			Indexing and Probabilistic Retrieval
4	11 March 2019			Advanced Retrieval Methods
5	18 March 2019	Prog. Midterm		Relevance Feedback and Link-based Retrieval
6	27 March 2019		Data Mining	Frequent Itemset Mining
7	01 April 2019			Clustering and Classification
8	08 April 2019			Classification Methodology
9	15 April 2019	Quiz		Document Classification and Recommender
10	22 April 2019			Holiday
11	29 May2019			Social network mining
12	06 May 2019		From Documents to Knowledge	Semantic Web
13	13 May 2019			Entity and Information Extraction
14	20 May 2019	Quiz		Data Integration
15	27 May 2019			Knowledge Graphs
